You may customize this scan to either:

-  The default scan shows all news for every company.
-  Select filters to view fewer trade opportunities. You may filter by market, stock types or news types. Filter by news types to see only those stories that drive your trade opportunities. Or, filter by stock types by establishing a higher stock price range and/or by creating a filter range on the volume of a stock. Many traders prefer trading stocks with higher volume to ensure ample liquidity for consistent trade pricing.

 Within in your scan select each stock to review the chart, review the news, and the recent trade to identify a hot trading opportunity for you.

 Review news before the market opens to identify hot trading opportunities during the first half hour of trading for the day.
